

Job Description — Product & Data Analyst

Company: Northstar Digital Labs (fictional)

Location: Bengaluru, India | **Employment:** Full-time | **Experience:** 1–3 years

About the Role

We are looking for a Product & Data Analyst to turn product and customer data into clear recommendations. The analyst will work with product managers, engineering, marketing, and leadership to define metrics, investigate trends, and support data-informed decisions.

Key Responsibilities

- Build and maintain SQL queries, dashboards, and recurring reports.
- Analyze product funnels, cohorts, retention, engagement, and conversion.
- Translate ambiguous business questions into measurable analyses.
- Partner with product and engineering teams on experiments and feature measurement.
- Communicate findings clearly to technical and non-technical stakeholders.
- Improve data quality and document metrics and analytical methods.

Required Qualifications

- 1–3 years of relevant analytics, product analytics, BI, or data experience.
- Strong SQL skills and comfort working with relational data.
- Working knowledge of Python or R for analysis.
- Experience with BI tools such as Tableau, Power BI, Looker, or equivalent.
- Understanding of statistics, experimentation, and common product metrics.
- Strong written and verbal communication.

Preferred Qualifications

- Experience with Amplitude, Mixpanel, GA4, dbt, BigQuery/Snowflake, or similar tools.
- Experience designing A/B tests and interpreting results.
- Familiarity with product-led SaaS businesses.
- Bachelor's degree in a quantitative, engineering, computer science, economics, or related field.

What Makes a Strong Candidate

The strongest applicants combine hands-on SQL and analytics ability with evidence of business impact, product thinking, clear communication, and practical experimentation. Candidates may still be considered with adjacent backgrounds if they demonstrate transferable analytical skills.
